Professional Summary

Frontend Developer with around **5 years of experience** building scalable, high-performance web and mobile applications using **React.js and React Native**. Strong expertise in modern front-end architectures, state management (Redux, Context API), and component-driven development. Experienced in developing responsive, user-centric interfaces, integrating **REST APIs & GraphQL**, and optimizing application performance across web and mobile platforms. Skilled in creating **reusable UI components**, improving application scalability, and delivering seamless user experiences in agile environments.

Technical Skills

Frontend	React.js, React Native, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Redux, Redux-Saga, Context API
Backend	Node.js, REST APIs, GraphQL
Cloud	AWS, GCP
Familiar	Kubernetes, Docker

Professional Experience

HCL Tech, Pune
Lead Engineer

Sep 2024 - Present

Michilog Bharat

- Developed an interactive route-based mapping application using React.js and Leaflet to visualize road anomalies between selected start and end locations.
- Implemented geospatial filtering logic to identify anomalies within a defined distance (≈50 meters) from the route, improving data accuracy and relevance.
- Built dynamic data visualization components using Chart.js, including donut charts and filters, to present anomaly insights and statistics.
- Optimized rendering and performance for large datasets (250+ markers) by implementing efficient state management and minimizing unnecessary re-renders.

Astemo

- Developed cross-platform mobile applications using React Native with reusable, modular UI components for Android and iOS.
- Integrated Spring Boot microservices and built REST/GraphQL API integrations to enable secure and scalable frontend-backend communication.
- Implemented AWS Amplify with Cognito for authentication and role-based access, ensuring secure user management.
- Optimized performance and maintainability through Redux-based state management, UI rendering improvements, and reusable component design.

Western Union

- Built scalable frontend and mobile features using React and React Native with Redux and Redux-Saga for predictable state management and efficient async operations.

- Designed reusable components and custom hooks to minimize code duplication and improve development efficiency.
- Integrated REST APIs using Fetch API and Axios for seamless data retrieval and updates across applications.
- Optimized application performance and maintainability through improved rendering techniques, reusable UI design, and agile practices using JIRA.

NTT Data Global Delivery Services, Pune
Info Technology Sr. Associative Developer

July 2021 - Sep 2024

IDBSS Logging Platform

- Architected and managed complex global state using Redux Toolkit for scalable and maintainable React.js applications.
- Implemented efficient asynchronous data handling in React using Redux-Saga, enabling features like debounced search, parallel API calls, and optimized user interactions.
- Built scalable frontend components and optimized performance by improving state flow, reducing race conditions, and enhancing UI responsiveness.

SIP Vegetable Traceability

- Developed scalable web and mobile applications using React.js and React Native with a focus on component-driven architecture and modern front-end practices.
- Designed and implemented reusable components and custom hooks to reduce code duplication and improve development efficiency.
- Migrated and enhanced applications using TypeScript, improving type safety, maintainability, and reducing runtime errors.
- Optimized application performance using React.memo, useCallback, and useMemo, and modernized state management by transitioning legacy Redux code to Redux Toolkit

Ethereum Accelerator Upgrade

- Implemented authentication and authorization using Auth Guards.
- Integrated UI elements such as charts, tables, forms and other interactive features into the application using Angular Material.
- Utilized RxJS library for reactive programming within the application.
- Implemented lazy loading techniques to optimize the loading speed of images, scripts, and other resources.

Education

Dr. D. Y. Patil Institute of Technology, Pimpri, Pune
Bachelor of Engineering (Computer Engineering), 8.91 CGPA

Aug 2018 - July 2021

Government Polytechnic, Amravati (Autonomous)
Diploma (Computer Engineering), 83.81 %

Aug 2015 - July 2018
