Professional Summary

Full Stack Developer with 4.8+ years of experience building scalable, high-performance web and mobile applications using **React.js, React Native, and Java**. Strong expertise in modern front-end architectures, backend API development, and secure system design. Experienced in **end-to-end application development**, including microservices, REST/GraphQL APIs, database design, and cloud-native solutions. Proficient in designing **resilient, secure, and high-availability systems** with strong knowledge of OAuth2, JWT, authentication, and secure coding practices. Skilled in working across the full development lifecycle in **Agile environments**, collaborating with cross-functional teams to deliver robust and scalable enterprise solutions.

Technical Skills

Frontend	React.js, React Native, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Redux, Redux-Saga, Context API
Backend	Java 18, Java 21, Spring Boot, Node.js, REST APIs, GraphQL
Cloud	AWS, GCP
Familiar	Kubernetes, Docker

Professional Experience

HCL Tech, Pune
Lead Engineer

Sep 2024 - Present

Michilog Bharat

- Developed scalable full-stack application using React.js and Java 17 (Spring Boot) for route-based anomaly detection.
- Designed and implemented REST APIs for geospatial data processing, enabling efficient querying of anomalies near routes (50m radius).
- Built dynamic dashboards using Chart.js with real-time data integration via backend APIs.
- Optimized performance for large datasets (250+ markers) using efficient API design and front-end state management.
- Ensured secure API communication using JWT-based authentication and role-based access control.
- Improved application resiliency and performance through optimized data handling and caching techniques.

Astemo

- Integrated Spring Boot microservices and built REST/GraphQL API integrations to enable secure and scalable frontend-backend communication.
- Developed cross-platform mobile applications using React Native integrated with **Java 21-based microservices**.

- Designed and implemented **scalable backend APIs using Spring Boot**, supporting frontend mobile workflows.
- Implemented AWS Amplify with Cognito for authentication and role-based access, ensuring secure user management.
- Optimized performance and maintainability through Redux-based state management, UI rendering improvements, and reusable component design.
- Developed hybrid mobile applications using React Native with integration of Android native modules using Kotlin for platform-specific features.

Western Union

- Built scalable frontend and mobile features using React and React Native with Redux and Redux-Saga for predictable state management and efficient async operations.
- Designed reusable components and custom hooks to minimize code duplication and improve development efficiency.
- Integrated REST APIs using Fetch API and Axios for seamless data retrieval and updates across applications.
- Optimized application performance and maintainability through improved rendering techniques, reusable UI design, and agile practices using JIRA.

NTT Data Global Delivery Services, Pune Info Technology Sr. Associative Developer

July 2021 - Sep 2024

IDBSS Logging Platform

- Developed backend services using **Java 17 and Spring Boot** for log processing and system monitoring.
- Implemented efficient asynchronous data handling in React using Redux-Saga, enabling features like debounced search, parallel API calls, and optimized user interactions.
- Built scalable frontend components and optimized performance by improving state flow, reducing race conditions, and enhancing UI responsiveness.

SIP Vegetable Traceability

- Developed scalable web and mobile applications using **React.js and React Native** with a focus on component-driven architecture and modern front-end practices.
- Designed and implemented reusable components and custom hooks to reduce code duplication and improved development efficiency.
- Developed full-stack solution using React.js, React Native, and **Java backend APIs**.
- Optimized application performance using React.memo, useCallback, and useMemo, and modernized state management by transitioning legacy Redux code to Redux Toolkit.

Ethereum Accelerator Upgrade

- Developed Android application features using Kotlin, including secure authentication and dynamic UI components.
- Implemented reactive programming using Kotlin Coroutines and Flow for efficient data handling.
- Optimized mobile performance through lazy loading and resource management techniques.
- Contributed to Android and Automotive-based application development with scalable architecture.

Education

Dr. D. Y. Patil Institute of Technology, Pimpri, Pune
*Bachelor of Engineering (Computer Engineering), **8.91 CGPA***

Aug 2018 - July 2021

Government Polytechnic, Amravati (Autonomous)
*Diploma (Computer Engineering), **83.81 %***

Aug 2015 - July 2018
